

Needle Safety

Loose needles should be treated as dangerous objects.

To protect yourself follow these safety steps:

- **Make sure your hands are free of any cuts or scratches.**
- **Have a secure hard plastic or metal container within reach.**
- **Keep the needle pointed away from you and those with you.**
- **Inform those around you that you are holding a needle.**
- **Keep your fingers away from the tip.**
- **If you cannot grasp the non-sharp end, use tongs to pick the needle up.**
- **Place the needle into the container and cover with secure lid.**
- **Wash hands immediately after handling a needle.**

How do I dispose of needles?

According to the Kentucky Division of Waste management, items such as needles, syringes, and other sharp objects should be:

- Put into a metal or hard plastic container with screw-on lid such as a laundry detergent bottle or a metal coffee can.
- Tape lid with durable tape such as duct or electrical tape.
- Label container "**NOT RECYCLABLE**" with a bold permanent marker.
- Place in household trash or take to hazardous waste collection event in your area.
